Subject : Gas Dynamics

Unit:

Weekly Hour: 2

Contents

Chapter one : Basic concepts from fluid dynamics and thermodynamics

1.1 Definitions

1.2 Assumptions

1.3 Applications

1.4 Methods of Analysis

Chapter Two: Introductory concept to compressible flow

2.1 Some Concepts of Compressible Fluid Flow

2.2 Velocity of Sound

2.3 Velocity of Sound for a Plane

2.4 Velocity of Sound in Perfect Gas, liquid and solid bodies

2.5 Mach Number

2.6 Types of the Flows

2.7 Physical Difference Between Incompressible, Subsonic and Supersonic Flows

2.8 Von Karman's Rules of Supersonic Flow

2.9 Similarity Parameters

2.10 Types of Flow

Sheet Ch.2

Chapter Three: Isentropic flow

3.1 Introductory Remarks

3.2 The one-dimensional approximation

3.3 Factors that Produce Variation in the Fluid Properties of Flow are

3.5 Simple Area Change

3.6 Converging-diverging Nozzle

3.7 Formula, Charts and Tables for the Isentropic Flow

3.8 Reference temperature, pressure and density

3.9 Reference Speeds

3.10 Critical States

3.11 Adiabatic Flow

3.12 Operation of Nozzle Under Varying Pressure Ratio

3.11 Pitot – Static Tube

Sheet Ch. 3

Chapter Four: Shock Wave

4.1 Normal shock wave

4.2 Governing Equations

4.3 Operation of Nozzle under Existence of Shock

4.4 Pitot- Static Tube in Supersonic Flow

4.5 Oblique Shock Waves

Relations across an Oblique Shock

Sheet Ch.4

Chapter Five :Flow in constant area ducts with friction Fanno process

5.1 Governing Equations

5.2 Summary of Frictional Effect

5.3 Choking Due to the Friction

Sheet Ch. 5

Chapter Six : Flow in constant area ducts with heat Rayleigh process

6.1 Basic Equations for Flow with Heat Exchange

6.2 The Rayleigh Line

6.3 Choking Effects Due to Simple Heating

Sheet No.6

Chapter Seven : Jet Propulsion

7.1 Definition

7.2 Operation

7.3 Classifications

7.3.1 Air -breathing jet engine(which use atmospheric air)

- Turbojet engines.

- Turboprop engines

- Ramjet engines

- Jet Problems

7.3.2 Self-contained jet engines (which do not use atmospheric air): Rockets.

7.4 Differentiate between air breathing engines and rocket engines

Sheet No.7
